##### B. Actions Taken

###### 1. Mariveles, Bataan

- ❖ Oil spill Response team (OSRT) from HQ Marine Environmental Protection Command (HMEPCOM) and the Marine Environmental Protection Group (MEPGRU) NCR-CL was dispatched to augment the MEPEU of Bataan to respond to possible oil spill
- ❖ OSRT with media and CGS Bataan went to site where M/T Deborah Uno sunk to further monitor the possibility of oil spill while the vessel is still underwater. OIC OSRT and Malayan Towage team leader were in close coordination in the conduct of survey inspection for possible salvage

operations of MT Deborah-Uno. PN layed out oil spill boom beside LT 616 docked at Crab B/A, NBHA Sangley Point Cavite City. Number of oil spill boom used was 13 segments

- ❖ OSRT together with 8 crew of F/B Faithful recovered 2 drums of oil waste and two (2) truckload of contaminated debris and were transferred to the City dumpsite. The Municipal garbage truck collected the contaminated debris
- ❖ OSRT personnel have seen minimal oil sheen more or less 1 liter coming out from F/B Faithful
- ❖ OSRT proceeded to Bataan Petron Refinery Corporation in Limay to pick up 3 segments of oil spill boom and 4 anchors with bouy
- ❖ Representative of Grand Asia Shipping Lines and the Captain of M/T Tug Water Star who surveyed the ill-fated ship confirmed the leakage of gas. Based on observation, there was half-centimeter crack in the pilot hose connected to the hydraulic Valve and that the pressure gauge reads 50 PSI
- ❖ The schedule for Salvaging Operation of MT Deborah Uno is expected this coming week. Three (3) segments of Spill boom temperature are stored at CGS Bataan for safe keeping ready for deployment

## **2. Oil Spill in Rosario, Cavite (land based)**

- ❖ On or about 141530H July 2010 Station Commander of CGS Cavite noticed an oil spill at vicinity Bouy Terminal of Petron Depot after conducting ocular inspection to MT Baliwag and while enroute back to Rosario Fishport. CGS Cavite was able to locate bubbles of black oil from the sea bottom. SOG divers attempted to verify the source but failed due to murky water and strong current underwater
  - ❖ Petron terminal deployed spill boom to contain the oil coming from the sea bottom approximately 2 km. off Rosario shoreline and requested permission to conduct oil dispersant spraying and a written authority from the station
  - ❖ MEPGRU personnel was dispatched into 2 teams to take oil and water samples at Petron Depot at the spill site and were instructed to provide technical assistance in the containment and clean up. Petron divers found out that the spill is coming from a loosened connection flange of the 12-inch diameter pipe Petron Depot was advised to conduct water pushing of the pipe to remove the remaining oil inside in order to conduct repair of leaking flange
  - ❖ As of 19 July 2010, the rate of leak was approximately 1 liter every 10 minutes. Oil leaking from the looses flange is being contained by 20 segments of oil spill boom and the oil was recovered by scooping or by use of absorbent materials and any oil that escapes was sprayed with biodegradable dispersant
  - ❖ Technical divers conducted initial dive to assess underwater condition and were able to locate two (2) sources of oil leak. However, divers made a final dive and confirmed negative sign of oil coming out from 2 sources of leaks
  - ❖ OSRT temporarily terminated clean up and recovery operations until July 19, 2010
